

BIOLOCK ACTIVE

Contained Waste Management System for 1–2 dogs / small breeds / contained spaces

A product of Time Alchemy Consulting (Pty) Ltd

Scan the QR code on your bucket for further product information and full support.

WHAT YOU NEED

Your BioLock Active bucket with lid, bucket liner, bio-absorbent cover material and scoop (included) and your dog's waste.

HOW TO USE:

- **Step 1 — Set up bucket liner:** The bucket liner included can be stretched over the rim of the bucket.
- **Step 2 – Add a layer of bio-absorbent material:** Add 2 full scoops to the empty bucket liner before adding in your dog waste.
- **Step 3 – Add Waste:** Place dog waste into the bucket.
- **Step 4 — Layer:** Use the scoop to sprinkle the bio-absorbent cover material over the waste until the surface is fully covered. For small waste: a light, level scoop is sufficient. For larger waste: use a heaped scoop to ensure full coverage.
- **Step 5 — Close the Lid:** after each use.
- **Step 6 — Repeat:** Each time your dog goes, add the waste into the bucket, cover it with the bio-absorbent cover material, and close the lid.
- As waste accumulates over multiple uses, add an additional layer of bio-absorbent material to maintain coverage, then close the lid.
- Depending on your dog's size and frequency of use, the included bio-absorbent material should last until the bucket is full.

WHAT TO EXPECT

Within the first few days you should notice a significant reduction in odour and fewer flies around your house and yard. Waste conditions stabilise inside the closed system over time. Results may vary depending on waste volume, frequency of use, and environmental conditions. The system works best when the material fully covers the waste surface each time waste is added. **Please keep the bio-absorbent material dry when not in use.**

IF YOU RUN INTO TROUBLE

- Smell returning → add more cover material
- Too much moisture → add more cover material

WHEN THE BUCKET IS FULL

Dispose of contents as you would regular dog waste – However, you should not flush the contents down the toilet. The bucket can be cleaned and reused with a new supply of cover material. Purchase a refill pack of cover material.

REFILLS

BioLock Active bio-absorbent cover material is available as a refill pack.

SAFETY

Not for use with any other pet or human waste. Keep out of reach of children. Wash hands after handling. Keep cover material bag closed when not in use to preserve biological activity. Store out of direct sunlight to avoid excess moisture build up. Preferably store the bucket under shelter.
